

Emerging Infectious Diseases, Novel & High-Risk Infections in the Home & Community Based Services Population – Home Care Agency Planning

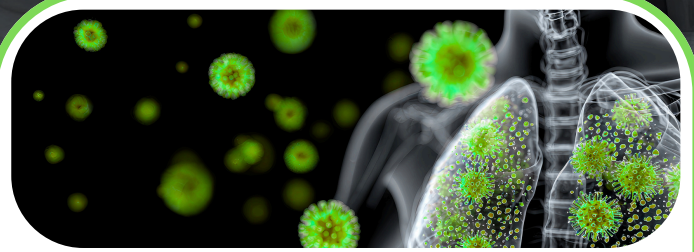

This is the second in the sequence of five webinars that address emerging infectious diseases or novel influenza outbreak planning for a home care audience.

The focus of this one-hour webinar is on the integration of planning into the home care agency's overall scope, plans and protocols for infection prevention and control for these and other high risk and prevalent infections in the home and community based services population.

The webinar will review plans and procedures to manage novel infectious agents and/or outbreaks in the home care setting with an emphasis on emergency preparedness planning and response for outbreaks, identifying community relationships and communication.

Participants are encouraged to attend the full series and may register for individual webinars as well.

This and future webinars in this series are offered at no cost through a grant from the Administration of Strategic Preparedness and Response, administered by the NYC Department of Health and Mental Hygiene (DOHMH) Office of Emergency Preparedness and Response (OEPR).

Presenter:

Melanie Ronda, MSN, RN, LTC-CIP, CPHQ, is a senior healthcare quality and infection prevention leader with more than two decades of experience across acute and long-term care settings. She currently serves as Senior Director of Healthcare Quality Improvement and Infection Preventionist at IPRO. Melanie is recognized for her expertise in infection prevention, regulatory readiness, and process improvement, with a proven track record of improving New York State survey outcomes. A frequent state and national speaker, she has also co-authored mandatory infection control education that meets New York State requirements and is deeply committed to advancing patient safety and quality outcomes.
